Text A

The opening of an essay published in 1773 about the mineral water found naturally in the Liverpool area of England

P R E F A C E

THE Spring which has been discovered in the Stone Quarry on the fourth side of Liverpool, having been much talked of, and used by many with evident advantage, I thought it might not be improper to endeavour at ascertaining its component principles, and, thence deducing its probable medical virtues. Convinced, both by reason and experiment, that it promis'd no inconsiderable means of restoring and preserving health, I should have accused myself of inattention to the interests of humanity, and to the welfare of society, had I not used my best endeavours to promote and extend its use amongst my fellow citizens. 5 10

But what more particularly induced me to aim at recommending it to their notice, by this little publication, was the undoubted evidence I had collected of its having been of signal service. Many mineral springs, both in England and abroad, possess'd of the like properties and principles, have acquired the highest reputation for their medicinal qualities and the cures they have wrought. 15 20

I would not wish to lay too great a stress upon the virtues of our Liverpool Spà, but rather, by ascribing to it simply those it possesses, and relating briefly and intelligibly some of the cases in which it has been found greatly beneficial, strive to excite the public to make a trial, which may at once procure reputation to the fountain, health to those who frequent it, and a heartfelt satisfaction to the proposer and promoter of it. 25

Liverpool, May 4th, 1773.

§ I. Of MINERAL WATERS in general.

WE distinguish by the term of *mineral waters*, those which are impregnated with some *mineral* principles, and hence are become *medicinal*.

35

They are properly divided into SALINE, SULPHUREOUS, and METALLIC.

We have found that those which have been termed *Spirituos* are indebted for that title, to a *gas*, or fix'd air only, to which they owe their sparkling, and that agreeable, pungent, acidulous taste. From this same principal they acquire the property they possess of dissolving metallic substances, as will be shewn hereafter.
