CHEMISTRY **9701/13**

Paper 1 Multiple Choice **May/June 2025**

1 hour 15 minutes

You must answer on the multiple choice answer sheet.

You will need: Multiple choice answer sheet
Soft clean eraser
Soft pencil (type B or HB is recommended)

INSTRUCTIONS

- There are **forty** questions on this paper. Answer **all** questions.
- For each question there are four possible answers **A**, **B**, **C** and **D**. Choose the **one** you consider correct and record your choice in soft pencil on the multiple choice answer sheet.
- Follow the instructions on the multiple choice answer sheet.
- Write in soft pencil.
- Write your name, centre number and candidate number on the multiple choice answer sheet in the spaces provided unless this has been done for you.
- Do **not** use correction fluid.
- Do **not** write on any bar codes.
- You may use a calculator.

INFORMATION

- The total mark for this paper is 40.
- Each correct answer will score one mark.
- Any rough working should be done on this question paper.
- The Periodic Table is printed in the question paper.
- Important values, constants and standards are printed in the question paper.

This document has **20** pages. Any blank pages are indicated.

1 Which isolated gaseous atom has a total of five electrons occupying spherically shaped orbitals?

A sodium

B fluorine

C boron

D potassium

2 Diagram 1 shows the reaction pathway for a reaction.

Diagram 2 shows a graph of concentration of reactant against time for the same reaction.

diagram 1

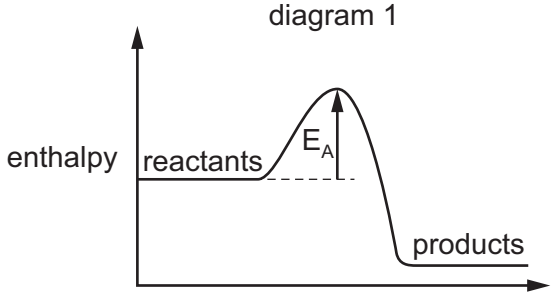

diagram 2

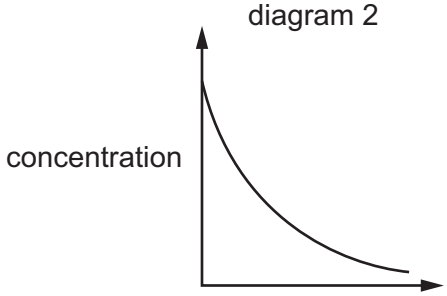
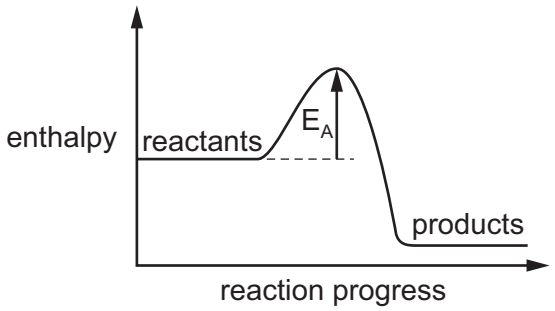
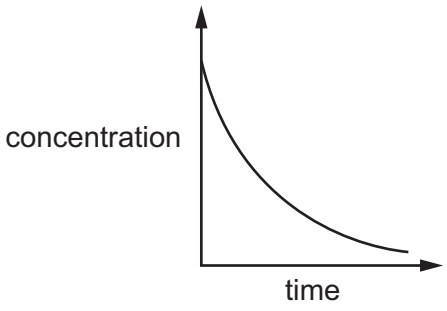


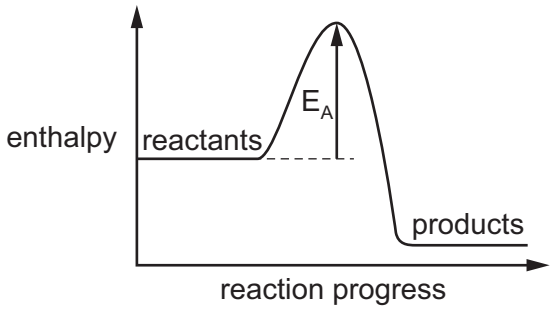
Which diagrams, drawn to the same scale, show the effect of increased temperature on this reaction?

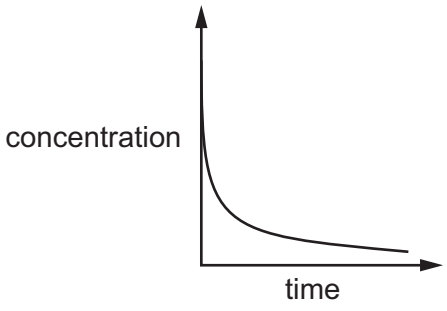
A



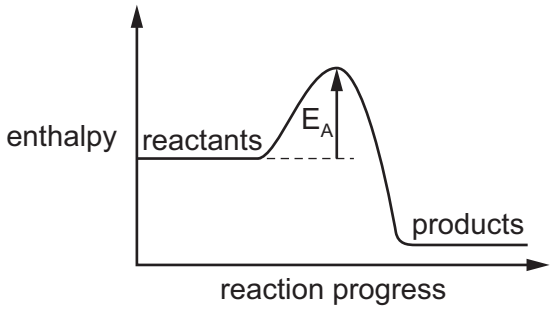


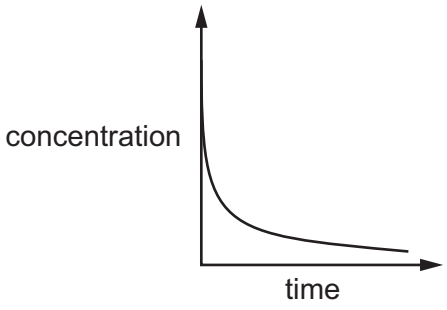
B



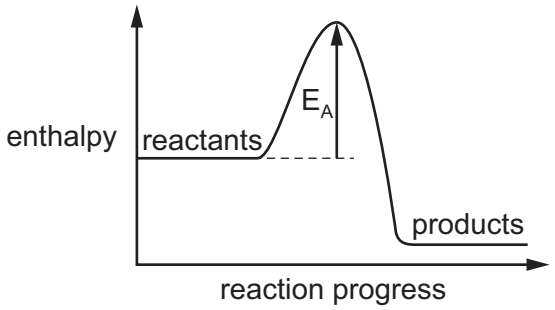


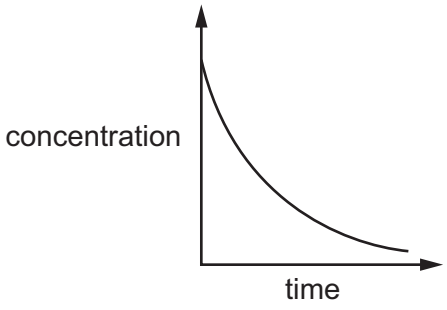
C





D

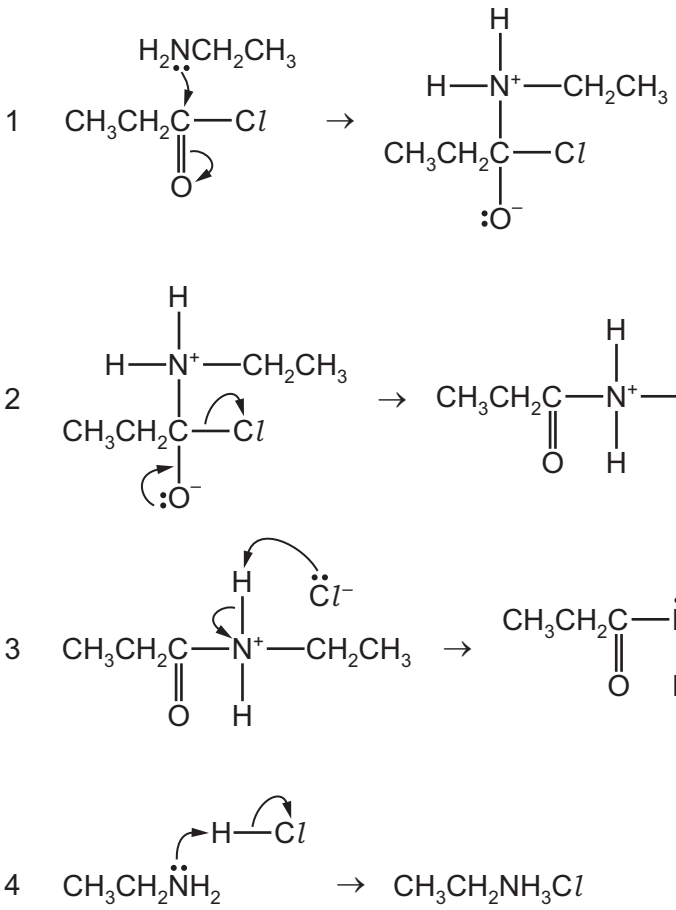




3 The equation shows the overall reaction between an amine and an acid chloride.

$$2CH_3CH_2NH_2 + CH_3CH_2COCl \rightarrow CH_3CH_2CONHCH_2CH_3 + CH_3CH_2NH_3Cl$$

The four steps in the mechanism are as follows.



Which steps are Brønsted–Lowry acid–base reactions?

A 1 and 3 **B** 3 and 4 **C** 3 only **D** 4 only

4 Chromium is present in compound X.

- Two moles of compound X react with exactly 3 moles of silicon.
- The only products of this reaction are 4 moles of chromium and 3 moles of a silicon compound in which the oxidation state of the silicon is +4.
- Chromium and silicon are the only elements that change their oxidation states in this reaction.

What could be the identity of compound X?

A Cr_2O_3 **B** Cr_2H_6 **C** Cr_2H_4 **D** Cr_2O_4

5 The reversible reaction shown is in equilibrium at a temperature of 450 °C.

$$H_2 + I_2 \rightleftharpoons 2HI \qquad \Delta H = -9.5\,\text{kJ mol}^{-1}$$

The table shows the equilibrium concentrations in the reaction mixture.

H_2	I_2	HI
$1.02\,\text{mol dm}^{-3}$	$0.02\,\text{mol dm}^{-3}$	$0.98\,\text{mol dm}^{-3}$

The temperature of the reaction mixture is increased at constant volume.

The concentration of one of the components **falls** to $0.80\,\text{mol dm}^{-3}$ at equilibrium under these conditions.

What is the concentration of H_2 in the new equilibrium mixture?

A $0.80\,\text{mol dm}^{-3}$

B $0.93\,\text{mol dm}^{-3}$

C $1.11\,\text{mol dm}^{-3}$

D $1.20\,\text{mol dm}^{-3}$

6 The first stage in the industrial production of nitric acid from ammonia can be represented by the following equation.

$$4NH_3(g) + 5O_2(g) \rightleftharpoons 4NO(g) + 6H_2O(g)$$

Using the following standard enthalpy change of formation data, what is the value of the standard enthalpy change, $\Delta H^{\ominus}$, for this reaction?

compound	$\Delta H_f^{\ominus}$ / kJ mol^{-1}
$NH_3(g)$	–46.1
$NO(g)$	+90.3
$H_2O(g)$	–241.8

A $+905.2\,\text{kJ mol}^{-1}$

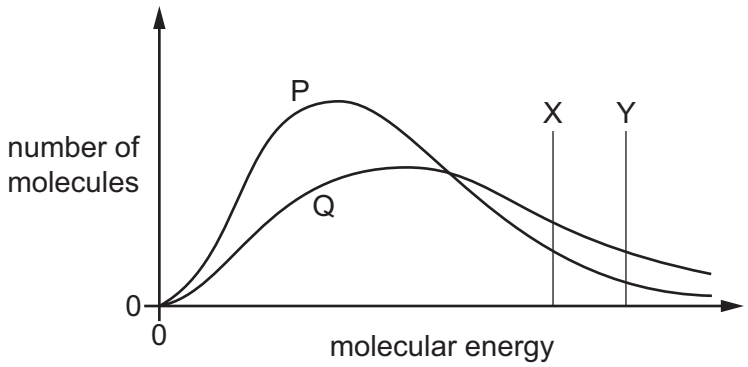
B $-105.4\,\text{kJ mol}^{-1}$

C $-905.2\,\text{kJ mol}^{-1}$

D $-1274.0\,\text{kJ mol}^{-1}$

7 The gaseous compound Z decomposes on heating.

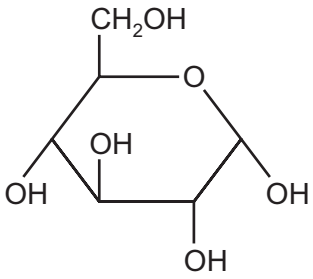
In the diagram, Boltzmann distributions for Z at two different temperatures, P and Q, are shown. The lines X and Y indicate activation energies for the decomposition of Z with and without a catalyst.



Which curve and which line describe the decomposition of Z at a higher temperature and with a catalyst present?

	higher temperature	catalyst present
A	P	X
B	P	Y
C	Q	X
D	Q	Y

8 The structure of a molecule found in food is shown.



Four statements about the molecule are listed.

1 This molecule contains only σ bonds.

2 This molecule contains both σ and π bonds.

3 The six-membered ring is planar.

4 The six-membered ring is non-planar.

Which two statements are correct?

A 1 and 3 **B** 1 and 4 **C** 2 and 3 **D** 2 and 4

9 In which substance are covalent bonds broken as it melts?

A silicon(IV) oxide

B ice

C iodine

D ethanol

10 Why is the second ionisation energy of sodium larger than the second ionisation energy of magnesium?

A The attraction between the nucleus and the outer electron is greater in Na^+ than in Mg^+.

B The nuclear charge of Na^+ is greater than that of Mg^+.

C The outer electron of Na^+ is more shielded than the outer electron of Mg^+.

D The outer electron of Na is in the same orbital as the outer electron of Mg.

11 BF_3 reacts with NH_3 to form a single compound with a simple molecular structure.

$$BF_3 + NH_3 \rightarrow F_3B{-}NH_3$$

Which row describes how the bond angles change during the reaction?

	F–B–F bond angle	H–N–H bond angle
A	decreases	decreases
B	decreases	increases
C	increases	decreases
D	increases	increases

12 The equation for the reaction of nitrogen with hydrogen is shown.

$$N_2(g) + 3H_2(g) \rightleftharpoons 2NH_3(g) \qquad \Delta H_r^{\ominus} = -92.2\,kJ\,mol^{-1}$$

Which statement is correct?

A $\Delta H_r^{\ominus}$ is measured at 298 °C.

B $\Delta H_r^{\ominus}$ is measured at 101 kPa.

C $\Delta H_r^{\ominus}$ represents the standard enthalpy change for the formation of ammonia gas.

D $\Delta H_r^{\ominus}$ represents the enthalpy change when 1.0 mol of $N_2(g)$ reacts with 1.0 mol of $H_2(g)$.

13 Hydrogen peroxide, H_2O_2, decomposes into water and oxygen when a suitable catalyst is added.

$20.0\,cm^3$ of aqueous hydrogen peroxide decomposes to produce $600\,cm^3$ of oxygen at room conditions.

What is the concentration of the aqueous hydrogen peroxide?

A $5.00\,mol\,dm^{-3}$

B $2.50\,mol\,dm^{-3}$

C $1.25\,mol\,dm^{-3}$

D $0.625\,mol\,dm^{-3}$

14 When 0.15 g of an organic compound is vaporised, it occupies a volume of $65.0\,cm^3$ at 405 K and 1.00×10^5 Pa.

Using the expression $pV = nRT$, which expression should be used to calculate the relative molecular mass, M_r, of the compound?

A $\dfrac{0.15 \times 65 \times 10^{-6} \times 1 \times 10^5}{8.31 \times 405}$

B $\dfrac{0.15 \times 8.31 \times 405}{1 \times 10^5 \times 65 \times 10^{-3}}$

C $\dfrac{0.15 \times 65 \times 10^{-3} \times 1 \times 10^5}{8.31 \times 405}$

D $\dfrac{0.15 \times 8.31 \times 405}{1 \times 10^5 \times 65 \times 10^{-6}}$

15 A washing powder contains sodium hydrogencarbonate, $NaHCO_3$, as one of the ingredients.

In a titration, a solution containing 1.00 g of this washing powder requires $7.15\,cm^3$ of $0.100\,mol\,dm^{-3}$ sulfuric acid for complete reaction. The sodium hydrogencarbonate is the only ingredient that reacts with the acid.

What is the percentage by mass of sodium hydrogencarbonate in the washing powder?

A 3.0% **B** 6.0% **C** 12.0% **D** 24.0%

16 The flow chart shows some reactions of nitrogen compounds.

Which row identifies gas 1 and salt 2?

	gas 1	salt 2
A	ammonia	ammonium nitrate
B	ammonia	sodium nitrate
C	nitrogen dioxide	ammonium nitrate
D	nitrogen dioxide	sodium nitrate

17 Mixing aqueous silver nitrate and aqueous sodium chloride produces a precipitate.

Addition of which reagent to the mixture gives a colourless solution?

A aqueous ammonia

B aqueous potassium iodide

C dilute hydrochloric acid

D dilute nitric acid

18 Which statement is correct?

A Barium oxide reacts with water at room temperature to form barium hydroxide and hydrogen.

B Calcium oxide does **not** react with water at room temperature.

C Magnesium hydroxide reacts with steam to form magnesium oxide and hydrogen.

D Strontium oxide reacts with water at room temperature to form strontium hydroxide only.

19 Which statement about the properties of halogens and hydrogen halides is correct?

A A chloride ion is a stronger reducing agent than an iodide ion.

B Chlorine is more volatile than bromine because chlorine has stronger intermolecular forces.

C Hydrogen bromide is more thermally stable than hydrogen iodide because it has a stronger covalent bond.

D Iodine is less reactive than bromine because iodine has weaker covalent bonds.

20 Three statements about the chemical periodicity of Period 3 oxides are listed.

1 The maximum oxidation state of the Period 3 elements in their oxides increases from sodium to phosphorus, then decreases from phosphorus to sulfur.

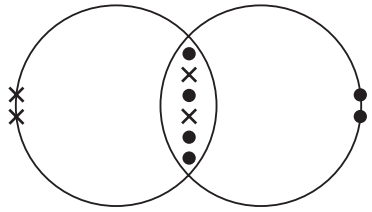
2 The oxides from sodium to aluminium dissolve in water without hydrolysis; from silicon to sulfur they are hydrolysed by water.

3 The structure and bonding changes from giant ionic to giant covalent to simple molecular.

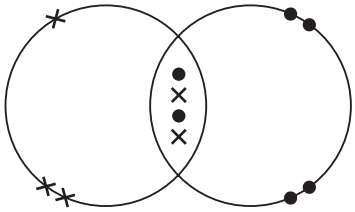
Which statements are correct?

A 1, 2 and 3 **B** 1 only **C** 2 and 3 only **D** 3 only

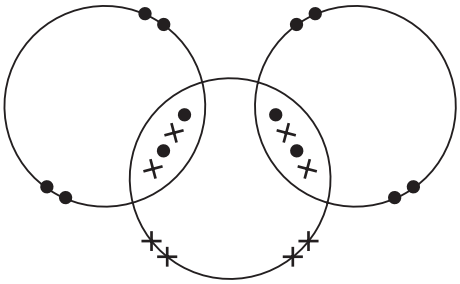
21 Which dot-and-cross diagrams represent molecules that can react with unburned hydrocarbons to form peroxyacetyl nitrate, PAN, a component of photochemical smog?



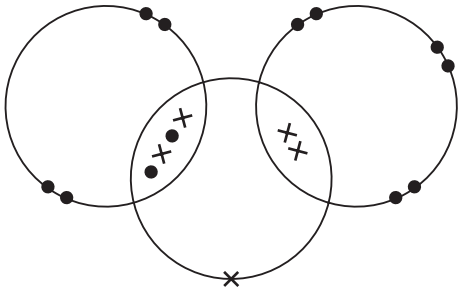
1



2



3



4

A 1 and 3 **B** 1 and 4 **C** 2 and 3 **D** 2 and 4

22 Which set of three elements contains a single element that has **both** the highest melting point **and** the lowest electrical conductivity of the three elements in the set?

A magnesium, aluminium and silicon

B aluminium, silicon and phosphorus

C sodium, magnesium and aluminium

D silicon, phosphorus and chlorine

23 In which row do the particles increase in size?

	smallest ⟶		largest
A	N	O	F
B	N^{3-}	O^{2-}	F^{-}
C	Na^{+}	Mg^{2+}	Al^{3+}
D	Na^{+}	Ne	F^{-}

24 W, X, Y and Z are Group 2 elements barium, calcium, magnesium and strontium but not in that order.

W reacts faster with dilute hydrochloric acid than Y.

The hydroxide of X is less soluble in water than the hydroxide of W.

The sulfate of Y is the most soluble of the sulfates of W, X, Y and Z.

The carbonate of Z decomposes more slowly than the carbonate of W at the same temperature.

What is the M_r of the nitrate of W?

A 148.3 **B** 164.1 **C** 211.6 **D** 261.3

25 Polymer J has repeat unit $–[CH(C_2H_5)CH(CH_3)]–$.

Polymer K has repeat unit $–[CH(CH_3)CH(CH_3)]–$.

Which row is correct?

	monomer from which polymer J is produced	monomer from which polymer K is produced
A	pent-1-ene	but-1-ene
B	pent-1-ene	but-2-ene
C	pent-2-ene	but-1-ene
D	pent-2-ene	but-2-ene

26 0.200 mol ethanenitrile reacts with an excess of dilute sodium hydroxide. The reaction produces organic compound S and ammonia gas only.

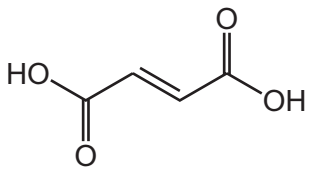
The reaction has an 80.0% yield.

Which mass of S is produced?

A 9.60 g **B** 13.1 g **C** 15.4 g **D** 16.4 g

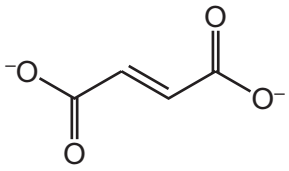
27 The structure of butenedioic acid is shown.

butenedioic acid

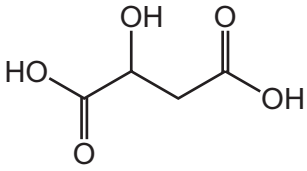


When an excess of NaOH(aq) is added to butenedioic acid, which organic product is formed?

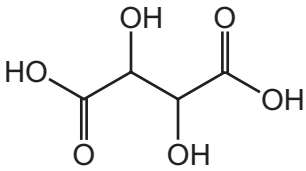
A



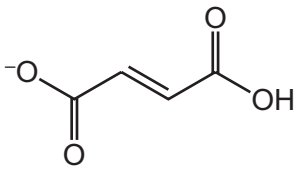
B



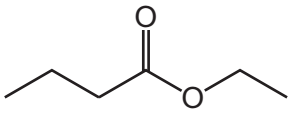
C

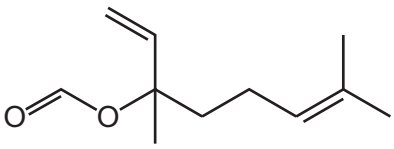


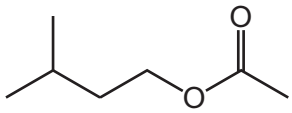
D



28 Four organic compounds are shown.







A mixture of these four compounds reacts with hot aqueous sodium hydroxide.

The products of this reaction are acidified.

Which organic acids are present in the products?

A butanoic, ethanoic and propanoic acids

B butanoic, ethanoic and methanoic acids

C ethanoic, 3-methylbutanoic and propanoic acids

D methanoic, 3-methylbutanoic and propanoic acids

29 Ethanal reacts with KCN dissolved in liquid HCN. This reaction involves the formation of an intermediate.

Which statement is correct?

A HCN does **not** have any lone pairs of electrons and so CN^- is the catalyst.

B The $O^{\delta-}$ of C=O attacks K^+ in a nucleophilic attack.

C A proton from HCN is transferred to the intermediate.

D The reaction is a nucleophilic substitution.

30 What is formed when propanone is heated under reflux with a solution of $NaBH_4$?

A propan-2-ol

B propan-1-ol

C propanal

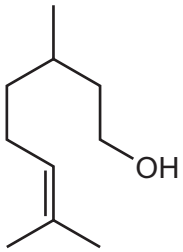
D propane

31 The compounds shown are all produced by plants.

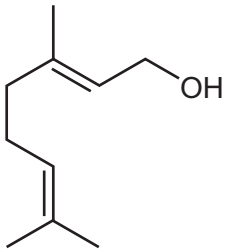
Each compound is warmed with acidified $K_2Cr_2O_7$.

Which compound will give a different observation to the other three?

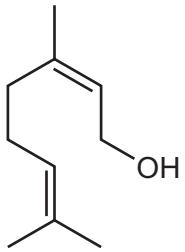
A



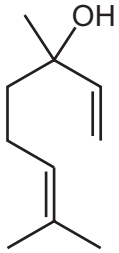
B



C



D



32 Structural and stereoisomerism should be considered when answering this question.

How many alcohols with the molecular formula $C_5H_{12}O$ give a yellow precipitate with alkaline I_2(aq)?

A 2 **B** 3 **C** 4 **D** 5

33 An amine is produced in the following reaction.

$$C_2H_5I + 2NH_3 \rightarrow C_2H_5NH_2 + NH_4I$$

What is the mechanism?

A electrophilic addition

B free-radical substitution

C nucleophilic addition

D nucleophilic substitution

34 The reaction shown can be used to lengthen a carbon chain.

$$CH_3CH_2CH_2Br + CN^- \rightarrow CH_3CH_2CH_2CN + Br^-$$

Which row shows the correct reagent and conditions for this reaction?

	reagent	conditions
A	KCN	heat under reflux in dilute sulfuric acid
B	KCN	heat under reflux in ethanol
C	HCN	heat under reflux in dilute sulfuric acid
D	HCN	heat under reflux in ethanol

35 Which row shows the products formed when cyclohexene reacts with acidified $KMnO_4$ under different conditions?

	product formed on reaction with cold, dilute acidified $KMnO_4$	product formed on reaction with hot, concentrated acidified $KMnO_4$
A		B		C		D		
36 Two steps in the free-radical substitution reaction between methane and chlorine are shown.

step 1 $CH_3\bullet + Cl_2 \rightarrow CH_3Cl + Cl\bullet$

step 2 $CH_3Cl + Cl\bullet \rightarrow CH_2Cl\bullet + HCl$

Which statement is correct?

A Step 1 is initiation and step 2 is propagation.

B Step 1 is propagation and step 2 is termination.

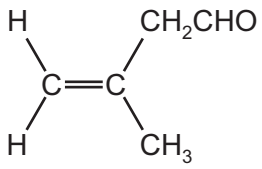
C Step 1 is initiation and step 2 is termination.

D Both steps are propagation.

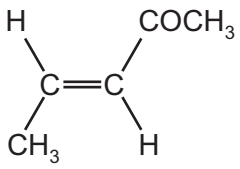
37 Compound P displays cis/trans isomerism and gives a red-brown precipitate with Fehling's solution.

What is P?

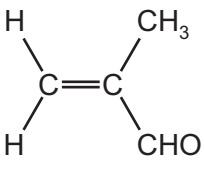
A



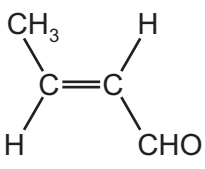
B



C

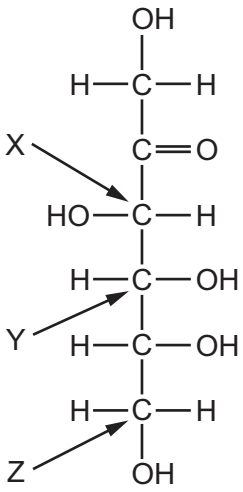


D



38 Fructose is a sugar with more than one chiral centre. The fructose molecule is shown with X, Y and Z indicating three carbon atoms.

fructose



Which carbon atoms are chiral centres?

A X, Y and Z **B** X and Y only **C** X only **D** Y only

39 An organic compound, T, contains only one functional group.

Compound T has the empirical formula C_2H_4O.

Some functional groups are listed.

1 alcohol

2 aldehyde

3 ester

4 ketone

Which functional groups are possible for compound T?

A 1 and 3 **B** 1 and 4 **C** 2 and 3 **D** 2 and 4

40 The mass spectrum of an organic compound has the following features.

- The molecular ion peak is at $m/e = 60$. This peak has a relative intensity = 100.
- There is a peak at $m/e = 61$, which has a relative intensity = 2.2.
- There is **no** fragment peak at $m/e = 17$.
- There is a fragment peak at $m/e = 31$.

What could be the identity of the organic compound?

A methyl methanoate, $HCOOCH_3$

B methoxyethane, $CH_3OC_2H_5$

C ethanoic acid, CH_3COOH

D propan-2-ol, $CH_3CH(OH)CH_3$

BLANK PAGE

Important values, constants and standards

molar gas constant	$R = 8.31\,\text{J K}^{-1}\,\text{mol}^{-1}$
Faraday constant	$F = 9.65 \times 10^{4}\,\text{C mol}^{-1}$
Avogadro constant	$L = 6.022 \times 10^{23}\,\text{mol}^{-1}$
electronic charge	$e = -1.60 \times 10^{-19}\,\text{C}$
molar volume of gas	$V_m = 22.4\,\text{dm}^3\,\text{mol}^{-1}$ at s.t.p. (101 kPa and 273 K) $V_m = 24.0\,\text{dm}^3\,\text{mol}^{-1}$ at room conditions
ionic product of water	$K_w = 1.00 \times 10^{-14}\,\text{mol}^2\,\text{dm}^{-6}$ (at 298 K (25 °C))
specific heat capacity of water	$c = 4.18\,\text{kJ kg}^{-1}\,\text{K}^{-1}$ ($4.18\,\text{J g}^{-1}\,\text{K}^{-1}$)
