

# **Cambridge O Level**

CHEMISTRY 5070/32

Paper 3 Practical Test May/June 2025

**CONFIDENTIAL INSTRUCTIONS** 

This document gives details of how to prepare for and administer the practical exam.

The information in this document and the identity of any materials supplied by Cambridge International are confidential and must NOT reach candidates either directly or indirectly.

The supervisor must complete the report at the end of this document and return it with the scripts.

#### **INSTRUCTIONS**

 If you have any queries regarding these confidential instructions, contact Cambridge International stating the centre number, the syllabus and component number and the nature of the query.
 email info@cambridgeinternational.org

phone +44 1223 553554

## General information about practical exams

Centres must follow the guidance on science practical exams given in the Cambridge Handbook.

#### Safety

Supervisors must follow national and local regulations relating to safety and first aid.

Only those procedures described in the question paper should be attempted.

Supervisors must inform candidates that materials and apparatus used in the exam should be treated with caution. Suitable eye protection should be used where necessary.

The following hazard codes are used in these confidential instructions, where relevant:

C corrosive
 HH health hazard
 F flammable
 MH moderate hazard
 T acutely toxic
 O oxidising

**N** hazardous to the aquatic environment

Hazard data sheets relating to substances used in this exam should be available from your chemical supplier.

#### Before the exam

- The packets containing the question papers must **not** be opened before the exam.
- It is assumed that standard school laboratory facilities, as indicated in the *Guide to Planning Practical Science*, will be available.
- Spare materials and apparatus for the tasks set must be available for candidates, if required.

#### **During the exam**

- It must be made clear to candidates at the start of the exam that they may request spare materials and apparatus for the tasks set.
- Where specified, the supervisor must perform the experiments and record the results as instructed.
   This must be done out of sight of the candidates, using the same materials and apparatus as the candidates.
- Any assistance provided to candidates must be recorded in the supervisor's report.
- If any materials or apparatus need to be replaced, for example, in the event of breakage or loss, this must be recorded in the supervisor's report.

#### After the exam

- The supervisor must complete a report for each practical session held and each laboratory used.
- Each packet of scripts returned to Cambridge International must contain the following items:
  - the scripts of the candidates specified on the bar code label provided
  - the supervisor's results relevant to these candidates
  - the supervisor's reports relevant to these candidates
  - seating plans for each practical session, referring to each candidate by candidate number
  - the attendance register.

# Specific information for this practical exam

During the exam, the supervisor (**not** the invigilator) must do the experiments in Questions 1 and 2 and record the results on a spare copy of the question paper, clearly labelled 'supervisor's results'.

#### **Apparatus**

The apparatus listed must be provided to each candidate.

#### Question 1

- $1 \times 250 \, \text{cm}^3 \, \text{beaker}$
- $1 \times 100 \, \text{cm}^3$  measuring cylinder
- 1 × stirring rod
- 1 × marker suitable for labelling glassware
- 1 × 25 cm<sup>3</sup> volumetric pipette
- 1 × pipette filler
- $1 \times 50 \, \text{cm}^3$  burette
- $1 \times stand$
- 1 × burette clamp
- 1 × funnel for filling burette
- 1 × white tile
- 1 × conical flask or other suitable vessel for titration
- 1 × teat/dropping pipette
- access to distilled water

#### Question 2

- 5-8 × test-tubes
- 1 × test-tube rack
- 1 × test-tube holder
- 1 × wash bottle containing distilled water
- 1 × Bunsen burner
- 1 × heat-proof mat
- 1 × spatula
- a supply of teat/dropping pipettes
- 1 × beaker (for washing teat/dropping pipettes)

paper towels

red and blue litmus papers or universal indicator paper

wooden splints

apparatus normally used in the centre to test for carbon dioxide with limewater\* apparatus normally used in the centre for flame tests on solid samples

\*If the apparatus normally used in the centre is a delivery tube and stopper, this equipment should be provided to fit both test-tubes and boiling tubes.

Candidates are expected to rinse and reuse test-tubes and boiling tubes where necessary. Additional tubes should be available.

© **Materials** C D M The materials listed in the table must be provided to each candidate. An excess of at least 10% of each material must be prepared to cover accidental D Cover accidental listed in the table must be provided to each candidate. An excess of at least 10% of each material must be prepared to cover accidental cover.

| Question 1 [MH] W   | label<br>tion 1<br>W   | candidate 0.9g      | identity citric acid monohydrate   | Place the solid citric acid monohydrate, HOC(COOH)(CH <sub>2</sub> COOH) <sub>2</sub> •H <sub>2</sub> O, in a suitable container for each   |
|---------------------|--|---------------------|--|---|
|                     | 0.100 mol/dm³<br>sodium hydroxide  | 100 cm <sup>3</sup> | 0.100 mol/dm³ sodium hydroxide   | candidate. It must not be provided in a 250 cm <sup>3</sup> beaker. If citric acid monohydrate is unavailable, 0.8g of anhydrous citric acid, HOC(COOH)(CH <sub>2</sub> COOH) <sub>2</sub> , can be used. Dissolve 4.0g of NaOH <b>[C]</b> in each dm <sup>3</sup> of solution. <b>Care:</b> the process of solution is exothermic and any concentrated solution is very corrosive. |
| [F]<br>[MH]<br>[HH] | thymolphthalein<br>indicator   | 2cm³                | thymolphthalein indicator  | See preparation instructions in the 2023–25 syllabus.   |
|                     | distilled water  | 120 cm <sup>3</sup> |  |   |
| Super<br>citric a   | visors are asked to considered with the consideration of the considerati | arry out a sta      | ndard acid-base titration using thymed water reacts with 27.0–29.0 cm <sup>3</sup> o | Supervisors are asked to carry out a standard acid-base titration using thymolphthalein indicator. It is essential that a solution containing 0.2g of citric acid monohydrate in $10\text{cm}^3$ of distilled water reacts with $27.0-29.0\text{cm}^3$ of the $0.100\text{mol/dm}^3$ NaOH.  |
| Question 2          | tion 2   |                     |  |   |
| [ME]                | ⋖  | 2 × 0.5g<br>samples | solid copper(II) carbonate   | Basic copper(II) carbonate, CuCO <sub>3</sub> •Cu(OH) <sub>2</sub> should be used. Additional samples should be available if candidates need to repeat an experiment.   |
|                     | В  | 10cm <sup>3</sup>   | 0.5 mol/dm <sup>3</sup> sodium or potassium bromide                                  | Dissolve $5.2g$ of NaBr or $6.0g$ of KBr in each $100\text{cm}^3$ of solution.  |
|                     | aqueous sodium<br>chloride   | 10 cm <sup>3</sup>  | 0.5 mol/dm³ sodium chloride  | Dissolve 2.9g of NaC $l$ in each 100 cm $^3$ of solution.   |

| © UCLES    |         | label                        | per<br>candidate   | identity   | notes   |
|------------|---------|------------------------------|--------------------|--|---|
|            |         | aqueous<br>potassium bromide | 10cm <sup>3</sup>  | 0.5 mol/dm³ potassium bromide                            | Dissolve 6.0g of KBr in each 100 cm <sup>3</sup> of solution.   |
|            |         | aqueous<br>potassium iodide  | 10 cm <sup>3</sup> | 0.5 mol/dm³ potassium iodide.                            | Dissolve 8.3g of KI in each 100 cm <sup>3</sup> of solution.  |
|            |         | dilute hydrochloric acid     | 10 cm <sup>3</sup> | 1.0 mol/dm³ HCl  | See preparation instructions in the 2023–25 syllabus.   |

| =          | [MH]    | dilute sulfuric acid         | 10 cm <sup>3</sup> | 0.5 mol/dm <sup>3</sup> H <sub>2</sub> SO <sub>4</sub>   | of the definition of the state |
|            | E Z     | aqueous ammonia              | 15cm <sup>3</sup>  | 1.0 mol/dm³ NH <sub>3</sub>                              | opportunity for malpractice when using a communal supply.   |
|            | [0]     | aqueous sodium<br>hydroxide  | 15cm <sup>3</sup>  | 1.0 mol/dm³ NaOH   |   |
| /CI/M/J/2! |         | aqueous silver<br>nitrate    | 10 cm <sup>3</sup> | 0.05 mol/dm³ AgNO <sub>3</sub>                           |   |
|            | [MH]    | limewater                    | 10 cm <sup>3</sup> | saturated aqueous calcium hydroxide, Ca(OH) <sub>2</sub> |   |

- All solutions must be thoroughly mixed
- Materials must be labelled only as specified in the 'label' column. The identities of chemicals labelled with letter codes, e.g. P, may be different from If you are unable to source any of these chemicals, you must contact Cambridge International as far as possible in advance of the exam for advice.

their descriptions in the question paper. Candidates must use the descriptions given in the question paper.

If chemicals are prepared in more than one batch, clearly labelled supervisor's results must be provided for each batch. The candidates using each batch must be listed on the supervisor's report. 6

# Supervisor's report

| Syllabus and component number |      |      | / |      |  |
|-------------------------------|------|------|---|------|--|
| Centre number                 |      |      |   |      |  |
| Centre name                   | <br> | <br> |   | <br> |  |
| Time of the practical session | <br> | <br> |   | <br> |  |
| Laboratory name/number        | <br> | <br> |   | <br> |  |

Give details of any difficulties experienced by the centre or by candidates (include the relevant candidate names and candidate numbers).

You must include:

- any difficulties experienced by the centre in the preparation of materials
- any difficulties experienced by candidates, e.g. due to faulty materials or apparatus
- any specific assistance given to candidates.

If chemicals have been prepared in more than one batch, list the candidates using each batch. Supervisor's results must be prepared and submitted using each batch of chemicals.

### Declaration

- 1 Each packet that I am returning to Cambridge International contains all of the following items:
  - the scripts of the candidates specified on the bar code label provided
  - the supervisor's results relevant to these candidates
  - the supervisor's reports relevant to these candidates
  - seating plans for each practical session, referring to each candidate by candidate number
  - the attendance register.
- 2 Where the practical exam has taken place in more than one practical session, I have clearly labelled the supervisor's results, supervisor's reports and seating plans with the time and laboratory name/number for each practical session.
- 3 I have included details of difficulties relating to each practical session experienced by the centre or by candidates.
- 4 I have reported any other adverse circumstances affecting candidates, e.g. illness, bereavement or temporary injury, directly to Cambridge International on a *special consideration form*.
