Paper 3 Theory (Core)

May/June 2025

1 hour 15 minutes

You must answer on the question paper.

No additional materials are needed.

INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

INFORMATION

- The total mark for this paper is 80.
- The number of marks for each question or part question is shown in brackets [].
- The Periodic Table is printed in the question paper.

This document has 20 pages. Any blank pages are indicated.

[Total: 8]

1 A list of substances is shown.

aluminium
ammonia
argon
bromine
carbon dioxide
fluorine
iron
magnesium
magnesium chloride
nitrogen
oxygen
potassium

2

Answer the following questions about these substances. Each substance may be used once, more than once or not at all.

State which substance is:

(a)	an element which forms an ion with a 1+ charge	
		[1]
(b)	a metal that is extracted in the blast furnace	
		[1]
(c)	a soft metal that is more reactive than sodium	
		[1]
(d)	approximately 78% of clean, dry air	
		[1]
(e)	a gas that is identified using damp red litmus paper	
		[1]
(f)	a liquid at room temperature and pressure	
		[1]
(g)	an element used in food containers because of its resistance to corrosion	
		[1]
(h)	a transition element.	
		[1]

This question is about sea water and the substances found in sea water.

(a) Table 2.1 shows the masses of the compounds formed when 1000 cm³ of sea water is evaporated.

Table 2.1

3

compound	formula	mass of compound/g
sodium chloride	NaC1	14.0
magnesium sulfate	MgSO ₄	3.0
potassium chloride	KC1	1.0
	CaCO ₃	1.0

Answer these questions, using the information from Table 2.1.

(i)) State the chemical name of CaCO ₃ .	
		[1]
(ii)) The total mass of compounds formed from 1000 cm ³ of sea water is 19.0 g.	
	Calculate the total mass of compounds formed from 1750 cm ³ of sea water.	
	mass =	g [1]
(iii)) Magnesium sulfate is soluble in water.	
	Choose one other compound that is soluble in water.	
	Tick (✓) one box.	
	lead(II) chloride	
	magnesium carbonate	
	potassium hydroxide	
	silver chloride	[4]

[2]

[2]

(b) Potassium chloride is found in sea water and contains chloride ions.

Describe a test for chloride ions.	
est	
observations	
JUSEI VALIOTIS	
	[2]

(c) Sodium ions are in sea water.

Complete Fig. 2.1 to show:

- the electronic configuration of a sodium ion
- the charge on the ion.

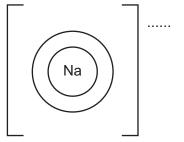

Fig. 2.1

(d) Sodium chloride forms a liquid when heated.

Describe the arrangement and motion of the particles in a liquid.

•				
motio	n			

(e) Sodium chloride is an ionic compound that dissolves in water.

State **two other** properties of an ionic compound.

1	 	 	 	

Sea water contains dissolved gases.

Name the gas that is essential for aquatic life.

.....[1

[Total: 12]

[3]

(a)

3 This question is about sulfur and its compounds.

(1)	Explain why sulfur is placed in Group VI of the Periodic Table.
	[1]

(ii) Two isotopes of sulfur are shown in Fig. 3.1.

Fig. 3.1

Complete Table 3.1 to show the number of protons, neutrons and electrons in one atom of these isotopes.

Table 3.1

	protons	neutrons	electrons
³³ S			
³⁶ S			

(b) Sulfur dioxide is an air pollutant.

(i) State **one** source of sulfur dioxide in the air.

(ii) State **one** adverse effect on the environment of sulfur dioxide.

(iii) Sulfur dioxide reacts with hydrogen sulfide.

Complete the symbol equation for this reaction.

$$SO_2 + 2H_2S \rightarrowS +H_2O$$
 [2]

(iv) State the type of bonding between the atoms in sulfur dioxide.

(c) A compound of sulfur has the formula $\mathrm{A}l_2(\mathrm{SO_4})_3.$

Complete Table 3.2 to calculate the relative formula mass of ${\rm A}l_2({\rm SO_4})_3$.

Table 3.2

atom	number of atoms	relative atomic mass	
oxygen	12	16	12 × 16 = 192
aluminium		27	
sulfur		32	

relative formula mass =[2]

[Total: 11]

- 4 This question is about organic chemistry.
 - Name the process that separates petroleum into its useful components. Fuel oil is obtained from petroleum. (ii) State one use of fuel oil. (iii) Natural gas is a fossil fuel. Draw a circle around one compound that is the main constituent of natural gas. carbon dioxide ethane ethanol methane [1] Describe how long chain hydrocarbon molecules can be made into short chain molecules. Include in your answer: the name of this process the conditions needed for this process to take place the products of this process.

.....[4]

State **one** reason why long chain hydrocarbon molecules are made into short chain hydrocarbon molecules.

......[1]

* 0000800000009 *

(c) Draw the displayed formula of a molecule of ethane.

[1]

(d) (i) Ethanol is manufactured by fermentation of aqueous glucose.

State two conditions for fermentation.

ı		
l	 	

(ii) State one use of ethanol.

(e) Fig. 4.1 shows the displayed formula of an organic molecule.

Fig. 4.1

(i) Deduce the molecular formula of this molecule.

(ii) Explain why the molecule in Fig. 4.1 is unsaturated.

[Total: 14]

- 5 This question is about metals and their reactions.
 - (a) A student investigates the reaction of four different metals, A, B, C and D, with dilute hydrochloric acid.

All other conditions are the same in each test-tube.

The results of the experiment are shown in Fig. 5.1.

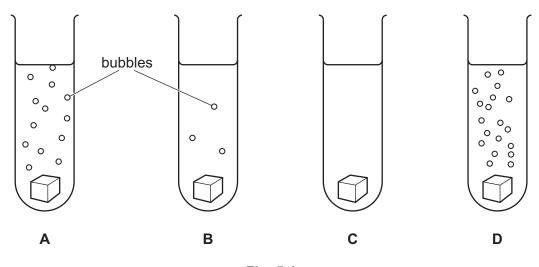

Fig. 5.1

(i) Put the metals, A, B, C and D, in their order of reactivity.

[1]

(ii) One way the student can increase the rate of the reaction in the experiment is to use a higher concentration of acid.

State **two other** ways to increase the rate of this reaction.

1	
2	
	[2]

(iii) Hydrogen gas is produced in this experiment.

Describe a test for hydrogen gas.

observations

* 0000800000011 *

	(iv)	State the formula of the ion that is present in all acids.	
			[1]
(b)	Stai	nless steel is an alloy.	
	(i)	State the meaning of the term alloy.	
			[1]
	(ii)	State one property of stainless steel that makes it suitable for cutlery.	
			[1]

[Total: 7]

- 6 This question is about ionic and covalent compounds.
 - (a) Complete the word equation to show the reaction between magnesium carbonate and nitric acid.

(b) Crystals of copper(II) chloride are prepared by adding excess copper(II) oxide powder to dilute hydrochloric acid.

Describe how to prepare a sample of pure, dry copper(II) chloride crystals after the reaction is complete.

In your answer, describe how to:

- remove the excess copper(II) oxide from the reaction mixture
- crystallise the copper(II) chloride
- dry the crystals.

molten lithium iodide.

Platinum metal is used as an inert electrode in this electrolysis experiment.

13

Name one other suitable material that can be used as an inert electrode.

.....[1

(iii) Name the products formed at the positive and negative electrodes when molten lithium iodide is electrolysed.

positive electrode

negative electrode[2]

(d) Table 6.2 shows some properties of five compounds, A, B, C, D and E.

Table 6.2

compound	electrical conductivity when molten	density in g/cm ³	melting point in °C
Α	does not conduct	3.53	1856
В	does not conduct	1.57	-157
С	conducts	1.93	110
D	conducts	3.03	1256
E	does not conduct	4.93	-83

State which **two** of the compounds, **A**, **B**, **C**, **D** and **E**, are simple molecules. Give **two** reasons for your answer.

- 7 This question is about energy changes in reactions.
 - (a) Table 7.1 shows the results of four experiments.

Table 7.1

experiment	initial temperature/°C	final temperature/°C
1	17	23
2	21	13
3	18	14
4	19	26

(i) State which experiment shows the greatest temperature change.

(ii) In experiment 4, zinc was added to dilute hydrochloric acid.

Complete the symbol equation.

$$Zn +HCl \rightarrow ZnCl_2 +$$
 [2]

(iii) Fig. 7.1 shows the incomplete reaction pathway diagram for the reaction in Experiment 4.

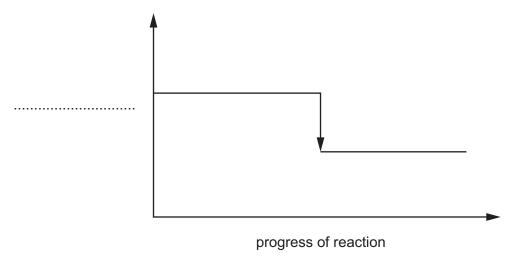

Fig. 7.1

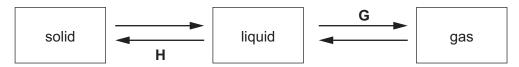

Complete Fig. 7.1 by labelling:

- the vertical axis
- · the reactants
- the products.

[2]

(b) Fig. 7.2 shows the changes of state of copper.

15

Fig. 7.2

Name the changes of state labelled **G** and **H**.

[Total: 7]

- 8 This question is about water and air.
 - (a) River water needs to be treated to make it safe to drink.

Two of the stages used in the treatment of domestic water are the addition of carbon and chlorination.

16

	Describe the reason for each of these stages.	
	addition of carbon	
	chlorination	
		 [2]
(b)	Describe how to test whether a sample of water is pure using boiling point.	
		[2]
(c)	Explain why distilled water is used in practical chemistry rather than tap water.	
		[1]
(d)	A sample of polluted air contains carbon monoxide and methane.	
	State one harmful effect of each of these air pollutants.	
	carbon monoxide	
	methane	 [2]
