Paper 4 A Level Structured Questions

October/November 2019

MARK SCHEME
Maximum Mark: 100

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2019 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

Cambridge International AS/A Level – Mark Scheme

PUBLISHED

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always whole marks (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

© UCLES 2019 Page 2 of 12

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Question	Answer	Marks
1(a)	Platinum and platinum	1
1(b)(i)	M1: Nernst quoted correctly $E = E^{\circ} + 0.0590 / \text{zlog [ox]} / \text{[red] or } E = 1.49 + 0.0590 log5$	2
	M2: (+)1.53 V minimum 2 sig. fig.	
	Correct answer scores 2 marks	
1(b)(ii)	+/-0.46 minimum 2 sig. fig.	1
1(b)(iii)	M1: $Mn^{3+} + 2Br \rightarrow Mn^{2+} + Br_2$	2
	M2: $2Mn^{3+} + 2Br^{-} \rightarrow 2Mn^{2+} + Br_{2}$	
1(c)	M1: 16200C M2: 1.0125×10^{23} electrons (use of 1.60×10^{-19}) M3: 0.0802 moles of copper (use of 5.09 and 63.5) M4: 0.1603 moles electrons M5: L = 6.32×10^{23} (correct answer [5]	5
	other approaches acceptable including: M1: 16200C M2: 1.0125×10^{23} electrons (use of 1.60×10^{-19}) M3: 5.0625×10^{22} copper atoms M4: 0.0802 moles of copper (use of 5.09 and 63.5) M5: L = 6.32×10^{23} (correct answer [5])	
1(d)	M1: $Mg^{2+} + 2e^- \Rightarrow Mg E^0 = -2.38$ and $2H^+ + 2e^- \Rightarrow H_2 E^0 = 0.00$	2
	M2: hydrogen produced instead / hydrogen easier to reduce / hydrogen preferentially reduced / hydrogen has more positive <i>E</i> ^e

Cambridge International AS/A Level – Mark Scheme **PUBLISHED**

Question	Answer	Marks
2(a)	M1: the time taken for the amount/concentration or a reactant to halve	2
	M2: the slowest step	
2(b)	 Use an excess of CH₃Br (Several experiments with) different initial [OH] control / equilibrate temperatures measure time find [OH⁻] by sample and titrate or use of pH probe or find [Br⁻] by sample and reference to use of Ag⁺. processing of results – plot graph of [OH⁻] vs rate or evaluate rate is proportional to [OH⁻] numerically Alternative approach: Use an excess of CH₃Br One experiment with known initial [OH⁻] control / equilibrate temperatures measure time find [OH⁻] by sample and titrate or use of pH probe or find [Br⁻] by sample and reference to use of Ag⁺ and describes how to calculate [OH⁻] . processing of results – plot graph of [OH⁻] vs time and look for constant half-life Award 1 mark for each correctly identified point.	4
	Award 1 mark for each correctly identified point.

Question	Answer	Marks
2(c)	M1 : rate = k[ester][OH ⁻]	3
	M2: value of k = 0.206	
	M3: units mol ⁻¹ dm ³ s ⁻¹	

Question	Answer	Marks
3(a)(i)	1.3 × 10 ⁻⁵	1
3(a)(ii)	M1: K_a expression used correctly and $K_a = 5.5(3) \times 10^{-10}$	2
	M2 : $pK_a = 9.26$	
	Award 2 marks for correct answer	
3(b)(i)	$NH_3 + H^+ \rightarrow NH_4^+$	1
3(b)(ii)	$NH_4^+ + OH^- \rightarrow NH_3 + H_2O$ or $H^+ + OH^- \rightarrow H_2O$ and reference to expression in Q shifting R	1
3(c)(i)	quotes $K_w = 1 \times 10^{-14}$ or 1×10^{-1} [H ⁺][OH ⁻] [H ⁺] = 1×10^{-7}	1
3(c)(ii)	M1: [H ⁺] = 2.3×10^{-7} (calculator value 2.290867×10^{-7}) and $K_w = [2.3 \times 10^{-7}]^2$	2
	M2: $K_{\rm w} = 5.2 \times 10^{-14}$ calculator 5.248074×10^{-14}	
	Award 2 marks for correct answer	

© UCLES 2019 Page 6 of 12

Question	Answer	Marks
4(a)	M1: correct use of stoichiometry	2
	M2 : answer + 189	
4(b)	M1: States or uses correct form of Gibbs equation $\Delta G = \Delta H - T\Delta S$	3
	M2 : appreciates / includes $\Delta G = 0$ at temperature required	
	M3: uses 1000 correctly and answer +624(.339)	
	Award 3 marks for correct answer	
4(c)	negative and decrease in number / amount of gas molecules	1

Question	Answer	Marks
5(a)	M1: Mg – white flame and Sr – red flame	2
	M2: white solid product once	
5(b)(i)	M1: $2Ca(s) + O_2(g) \rightarrow 2CaO(s)$ $CaCO_3(s) \rightarrow CaO(s) + CO_2(g)$ all substances, balanced	2
	M2: all state symbols	
5(b)(ii)	neutralises acid / raises pH	1
5(b)(iii)	M1: ΔH_{lat} and ΔH_{hyd} decrease down group	3
	M2: ΔH_{lat} decreases / changes more	
	M3: ΔH_{sol} becomes more exo / more –ve / less endo / less +ve	

© UCLES 2019 Page 7 of 12

Question	Answer	Marks
5(c)	 no change (for hydroxide) / colourless solution white (for sulfate) precipitate (for sulfate) Award 1 mark for two points, award 2 marks for all three points	2
5(d)	M1: stability increases / higher T needed for decompose	3
	M2: larger ionic radiusM3: harder to distort / polarise anion / carbonate ion or harder to polarise / weaken C–O or C=O bond.	

Question			Answer	Marks
6(a)	donates one pair of electr	rons / forms one coordin	ate bond	1
6(b)	Reagent added to a solution of CuSO ₄ (aq)	Observations	Formula of the copper(II) compound or complex ion that is formed	4
	a few drops of dilute ammonia	blue ppt	Cu(OH) ₂ or Cu(OH) ₂ (H ₂ O) ₄	
	an excess of dilute ammonia	deep blue solution	[Cu(NH ₃) ₄] ²⁺ or [Cu(NH ₃) ₄ (H ₂ O) ₂] ²⁺	
	an excess of aqueous sodium hydroxide	blue ppt	Cu(OH) ₂ or Cu(OH) ₂ (H ₂ O) ₄	
	an excess of conc HC <i>l</i> .	green-yellow / yellow-green / yellow	[CuC4] ²⁻	
	Award 1 mark for each co	orrect observation and f	ormula in a row of the table.	

© UCLES 2019 Page 8 of 12

Question	Answer	Marks
6(c)	 ligand exchange magnitude of d-orbital splitting changes / ∆E for d-orbitals changes / energy gap between d-orbitals changes change in colour / frequency / wavelength of light absorbed electrons are promoted/excited to higher d Award 1 mark for two points, award 2 marks for three points, award 3 marks for all four points	3
0(-1)		
6(d)	M1: E° values 1.36 and 0.77 quoted M2: $2\text{FeSO}_4 + Cl_2 \rightarrow \text{Fe}_2(\text{SO}_4)_2 Cl_2$ or $2\text{Fe}^{2+} + Cl_2 \rightarrow 2\text{Fe}^{3+} + 2Cl^{-}$	2
6(e)(i)	[[FeCl ₄] ⁻] / [[Fe(H ₂ O) ₆] ³⁺][Cl ⁻] ⁴	1
6(e)(ii)	0.078(125)	1

Question	Answer	Marks
7(a)(i)	 two or more repeat units correct orientation of groups on all four rings and rings correct trailing bonds shown amide links all correct Award 1 mark for two points, award 2 marks for all four points	2
7(a)(ii)	polyamide and condensation	1
7(a)(iii)	yes and can be hydrolysed	1
7(a)(iv)	PCl ₃ or PCl ₅ or SOCl ₂	1
7(a)(v)	M1: conc nitric acid + conc sulfuric acid	2
	M2: Sn + HC <i>l</i>	

© UCLES 2019 Page 9 of 12

Question	Answer	Marks
7(b)(i)	M1: sequence / order of amino acids	3
	M2: α -helix or β -sheet	
	M3: folding of chain or 3-D shape	
7(b)(ii)	covalent bonds / peptide bonds / amide bonds	1
7(b)(iii)	M1: hydrogen bonds	2
	M2: between C=O and N-H	

Question	Answer	Marks
8(a)	bromine / Br ₂ and uv / light / heat	1
8(b)	1,1-dibromoethane	1
8(c)	NCCH ₂ CH ₂ CN / CH ₂ CNCH ₂ CN	1
8(d)	M1: KCN/NaCN/CN-	2
	M2: boil/heat/reflux and ethanol as solvent	
8(e)(i)	acidified manganate(VII) or dichromate(VI)	1
8(e)(ii)	carbon dioxide and water	1

© UCLES 2019 Page 10 of 12

Question	Answer	Marks
8(f)	M1: most acidic: hexanoic acid > phenol > hexan-1-ol :least acidic	3
	 the other O atom in CO₂H group of hexanoic acid either withdraws charge from OH group or is electronegative and weakens O–H bond or stabilises resultant anion/negative ion / –CO₂- group/carboxylate ion 	
	 benzene / aromatic / C₆H₅ ring in phenol <u>delocalises</u> either lone pair on O atom and weakens O–H bond or lone pair on resultant anion/negative ion / phenoxide ion this stabilises resultant anion negative ion / –CO₂-group/carboxylate ion 	
	the alkyl group in hexan-1-ol donates electrons this strengthens O–H bond	
	Award 1 mark for each bullet point identified.	
8(g)(i)	M1 : δ12.7 is COOH	2
	M2: $\delta 3.3$ is CH and $\delta 1.1$ is CH ₃	
8(g)(ii)	quadruplet / quartet 3 H / protons on neighbouring / adjacent carbon / carbons / C	1
8(g)(iii)	2 (butanedioic acid) and 3 (methylpropanedioic acid)	1

Question	Answer	Marks
9(a)(i)	10	1
9(a)(ii)	120	1
9(b)(i)	correct acid chloride	1
9(b)(ii)	NH ₃ or ammonia	1

© UCLES 2019 Page 11 of 12

Cambridge International AS/A Level – Mark Scheme **PUBLISHED**

Question	Answer	Marks
9(c)	M1: (C ₅ NH ₄)COOH or (C ₅ NH ₅)+COOH	2
	M2 : (C ₅ NH ₄)COO ⁻ (Na ⁺) or (C ₅ NH ₄)COONa	
9(d)(i)	LiA <i>l</i> H ₄	1
9(d)(ii)	M1: most basic: X > phenylamine > nicotinamide :least basic	3
	M2: LP in X cannot be delocalised	
	M3: LP in phenylamine <u>delocalised</u> over the benzene ring or LP in amide <u>delocalised</u> (more effectively) by C=O	
9(e)	M1 : $M + 1/M = (1.1 \times ?)/100$	2
	M2 : Ans 5.28	
	Award 2 marks for correct answer
